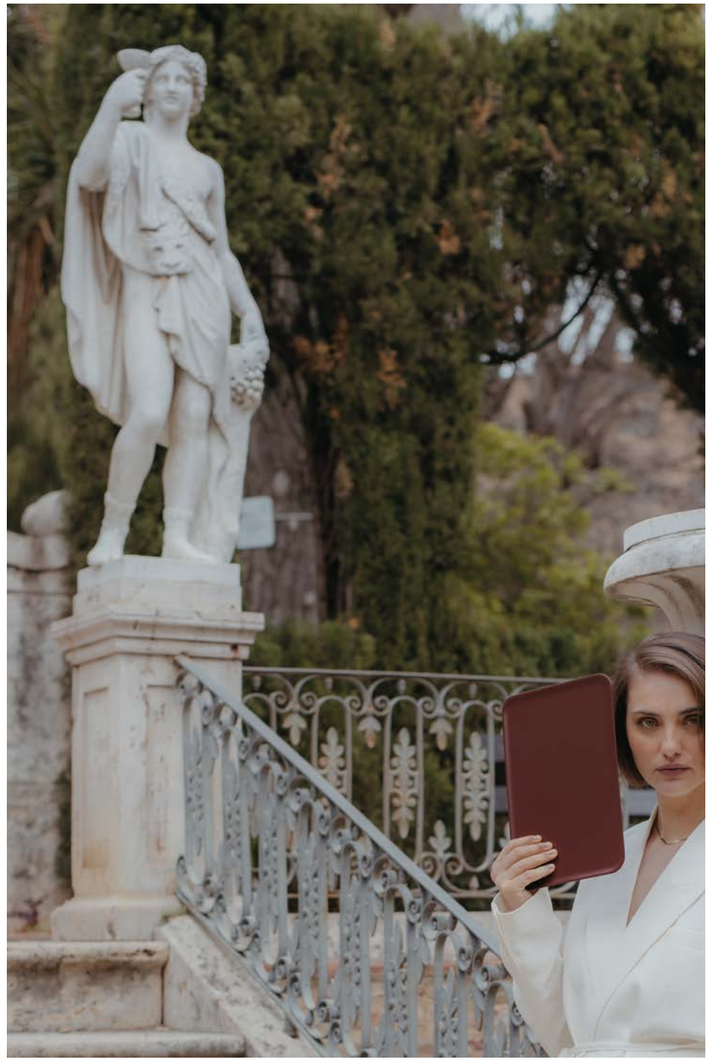
industrial accuracy and craftsmanship

brand essence



The design and the beauty of the details make the difference.

Personalisation taken to the limit with unique textures, colours and emotions.

30 years designing spaces with a global concept, integrating furniture, worktops and washbasins, shower trays, bathtubs, panels, radiators, mirrors and accessories.

Passion for innovation combined with a work where details are the key.

Creativity and technique joined to create design products which adapt to each space.

design and innovation

Details and textures that make the difference

The search for new innovative materials that respond to the needs of the bathroom space allows us to be at the forefront.

studio fiora

Our identity. The soul of Fiora is present in each of our creations.

Studio Fiora is our in-house creative studio, a commitment to maintain and respect the codes of our DNA: craftsmanship, quality, creativity, functionality and innovation of each design.

Details, creativity, inspiration, ideas, materials...
It's our way of leading the way.

Creation of unique spaces adapted to each person or project.

Adapting and customising each collection to global architecture, design or interior design projects.

Details, materials, textures, colours and unique sensations combined together to transmit the essence of each project and adapt ourselves to it.

fiora contract

on the road

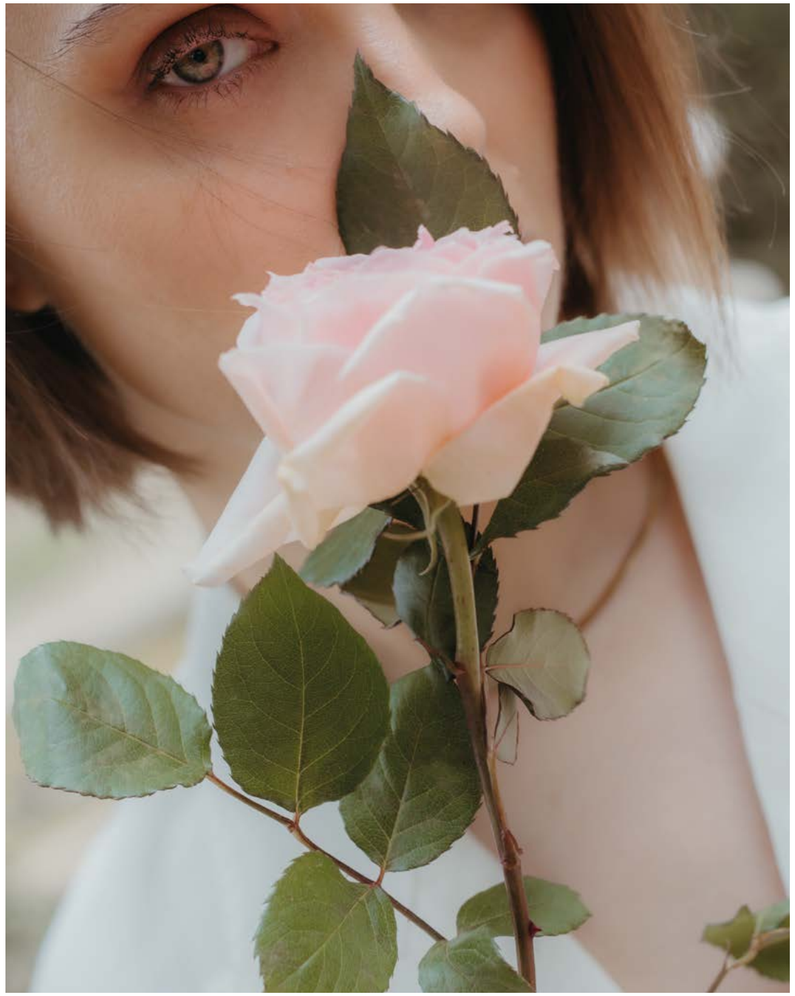
Our path to sustainability.

We continue to take steps forward in the search for balance and real sustainability.

The use of resources and the efficiency of our materials are already a reality that helps us to take care of our environment.

more sustainable products

Shower trays, vanity tops and washbasins that are more sustainable and respectful of our environment, containing more than 50% of components of recycled origin.



All our products are silica free.

Pioneering technology to be more environmentally friendly.

Lighter and stronger shower trays.

Weight reduction, silex titan is 30% lighter.

Perfect balance between lightness and strength.

lightweight shower trays

Reduction of the mineral load in order to reduce their weight and be more sustainable.

REMINDER

Silex Titan is:
30% lighter
and just as strong.

silex titan

the purity of nanobath

Cleaner and safer surfaces that preserve the hygiene of every space thanks to its advanced technological treatment, based on silver microparticles, which acts against bacterial activity.

This protective coating improves the hygienic qualities of all surfaces by giving them fungicidal, antibacterial, and hydrophobic properties throughout the product's life cycle.

Silexpol®

Anti-slip material patented by Fiora with a great resistance and a high ability to customise.

It is made by polyurethane resin that gives it a high quality, resistance, durability and elasticity.

A versatile material with a wide capacity for customisation in sizes, colours, textures and sizes that creates the perfect combination of design and usability.

All our products are silica free.

Wave

Wave by Yonoh&Fiora is a design created by Yonoh Creative Studio.

The beauty of Natural Stone and the minimalist and elegant design merge to create a unique shower tray that elevates the bathroom space. The natural marble tray integrates into the design of the shower tray, creating a harmonious and unique set. Adaptable to any space and with five different marble finishes to pair with other Fiora collections and create a unique overall ambiance.

30 Selene shower tray Pizarra 37T Cenere. Skin Panel Pizarra 0P Blanco Total

Selene

Innovation and design with embossed circular grate.

Selene is the shower tray that combines innovation and design with functionality and simplicity. With pure and clean lines, straight and without a perimeter frame, which contrasts with the full moon-shaped circular grate with a slight relief, providing a differential creative value.

The grate is combined with the shower tray in slate texture, rounded with a soft convex shape and rests on light legs that give it an exclusive and innovative design.

Sfera

Dreamy sinuous asymmetry.

Design is combined with asymmetry and texture. Sfera represents the most natural beauty, a shower tray with a design inspired by nature and created to dream.

Asymmetrical and with rounded shapes, the new Sfera tray takes creativity to the extreme in its shapes with a soft curved frame on one side, which ends its sinuous path in an original moon-shaped grate. Sfera has a double texture on the surface, one on the inside and another on the grate and its curved side frame surrounding it.

Sfera shower tray Concrete 36T Capuccino. Skin Panel Concrete 36T Capuccino. Hylla shelves Concrete 36T Capuccino - 42M Ultramar. Belly bathtub 36T0SS Capuccino interior Blanco. Midnight side table 42M Ultramar and 2MT Gold.

Sfera shower tray Concrete 41M Seda. Skin Panel Concrete - Listello 41M Seda. Hylla shelf Listello 41M Seda. Hylla shelf 41M Seda.

Kou

DESIGN AWARD 2021

Designed to stand out.

Kou is noted for its special design of rounded lines, both in the smooth perimeter framing in a single piece and in the layout of its grate, created in the same texture and colour as the shower tray.

Its design, with a minimum thickness and maximum safety frame and integrated drain, merge creativity and functionality in this collection, to create a shower tray with an innovative design that stands out for its strong and resistant structure.

Kou shower tray Lastra 0P Blanco Total.

Silex Titan shower tray Pizarra 0P Blanco Total 04 grate Texture and colour.

Pioneering technology to be more environmentally friendly.

Lighter and stronger shower trays.

Weight reduction, silex titan is 30% lighter.

Perfect balance between lightness and strength.

Silex Titan
lighter

Lightness, innovation, design and strength.

In Fiora, we have used the most advanced technology in order to be environmentally friendly.
We have created a perfect balance between lightness and strength.

Thinner shower trays, 30% lighter than the original Silex and at the same time, just as strong as resistant.

Silex Titan reduces the mineral load and its weight, making it more sustainable and facilitating its handling and installation.

A new concept of lightened tray with advanced technology to achieve the perfect balance between lightness and strength.

Silex Titan shower tray Pizarra 40M Nude 04 grate Texture and colour. Skin Panel Pizarra 40M Nude. Hylla shelf Pizarra 40M Nude. Stool 40M Nude - 1MT Inox.

Essential

Practical and functional simplicity.

Essential, a basic of the Fiora collections, refecting the simplicity of lines in its simple and practical design.

Thanks to its centred stainless steel grate, it is the best option for those looking for a functional, simple, and pure design.

New: now with a coloured grate in Blanco Total (0P) as standard on the Essential Blanco Total (0P) shower tray.

Essential shower tray Pizarra 0P Blanco Total rejilla Blanco. Skin Panel Pizarra 0P Blanco Total and 56M Dark. Hylla shelf Listello 0P Blanco Total. Stool 0P Blanco Total and 0MT Negro.

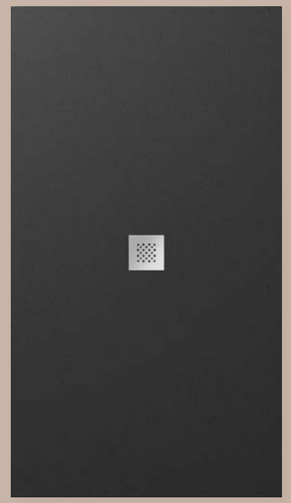
Elax

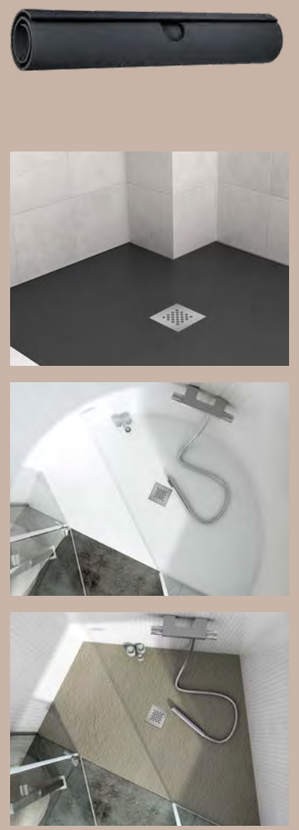
Revolutionary and innovative, Elax pushes the boundaries with its unique qualities.

Flexible and anatomically soft on the surface, it adapts to the pressure of your body on a warm, tempered, soft, and non-slip surface. With a unique touch and a more pleasant sensation thanks to its gentle and warm surface, Elax adapts to any space and shape, its great versatility allows it to be easily cut to size with a cutter and a slight twist.

Adaptable to any space and shape

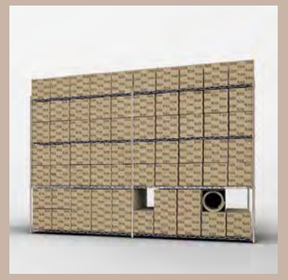
Its smart material can be handled with a cutter and a slight twist. This is why it easily adapts to any space. It is flexible and can be rolled up, making transportation and storage easier while preventing shocks and breakage.





Reduced weight -60%

It is easily transportable thanks to the lightness of its material, with a reduced weight of 60% compared to a conventional shower tray, and its ability to be rolled up.



Easy storage

It is delivered rolled up to take up less space and make it easier to handle.

Comfortable and safe tactile feel

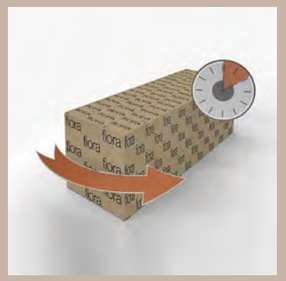
The flexible, non-slip material offers a very pleasant touch.

Shock resistant

Its flexibility gives it total resistance to shocks and breakage.

Fast delivery

Comes in standard sizes for later Customisation as they can be cut during installation.



Easy installation

For plumbers and installers.

REMINDER:
The slopes must be made on-site before the installation of the tray.

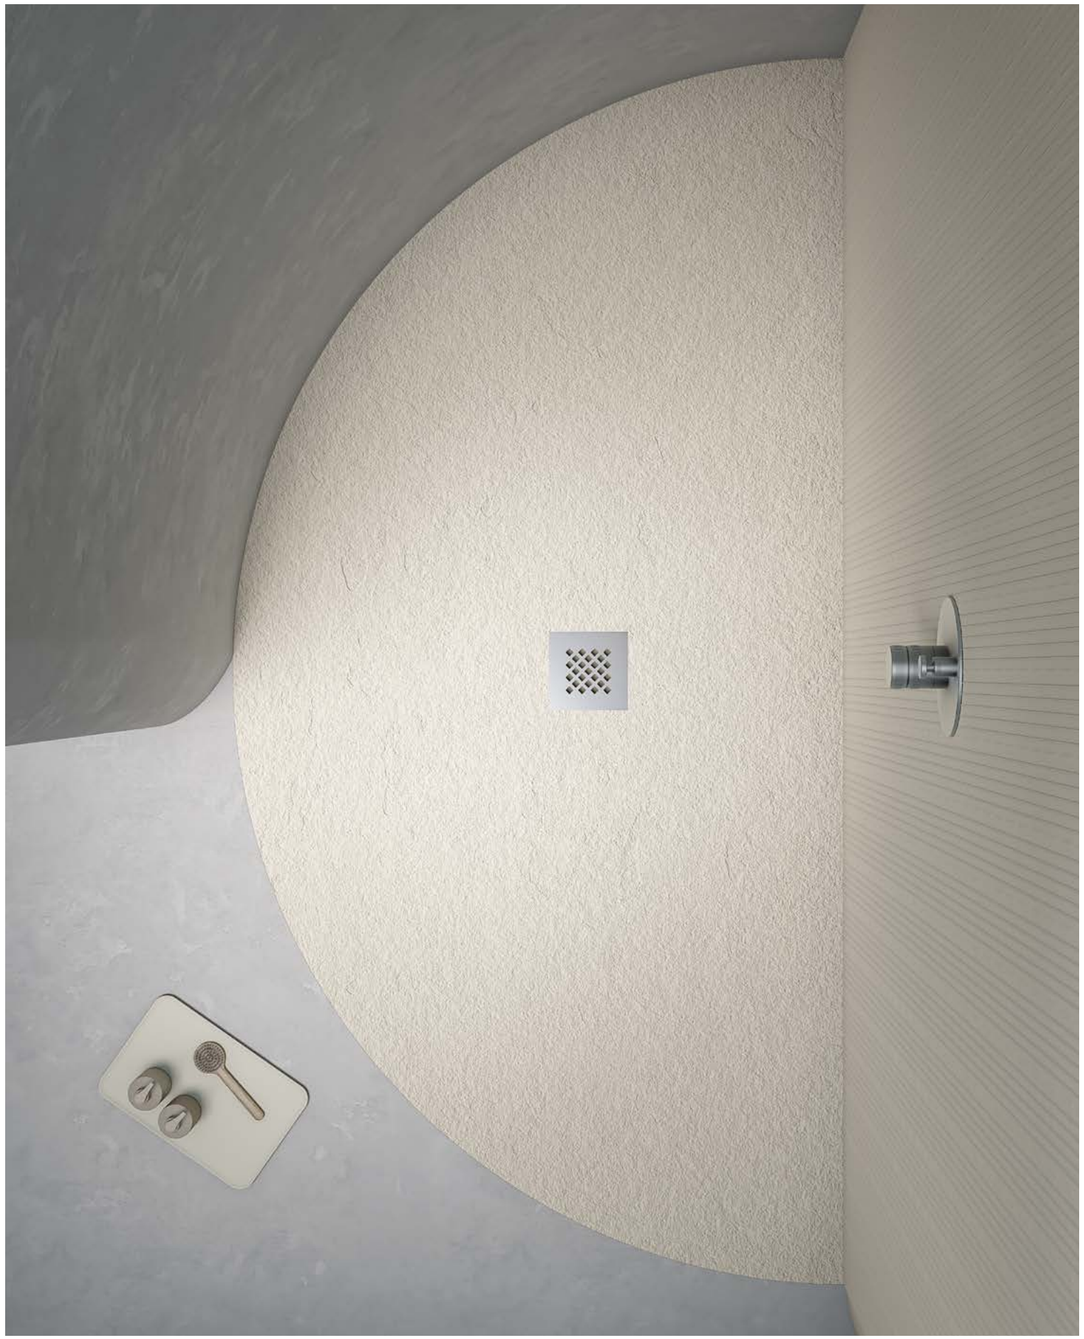
Non-slip Class 2

Warm, tempered, soft, and non-slip surface.

Easy cutting

Easy to cut with a simple cutter thanks to the flexible composition of the material, that makes it easy to handle.

Elax Classic System shower tray Pizarra 37T Cenere. Hylla tray 37T Cenere.



94 Elax Classic System shower tray Pizarra 41M Seda. Skin Panel Row 41M Seda. Hylla tray 41M Seda.

skin panels

Decoration and creativity to a further level.

Far more than a bathroom cladding option. In addition to their functional role in covering walls or in the simple switch from a bathtub to a shower, Fiora’s Skin Panels offer a creative proposal for design and aesthetic renovation at a further level.

Panels take spaces on a new perspective, combining texture and colour with the existing elements in the bathroom, and increasing the possibilities of each space as far as your imagination will take you.

110 Skin Panel Listello 44M Tuile. Wave shower tray Concrete 0T Blanco Roto and PN06 Black Gold.

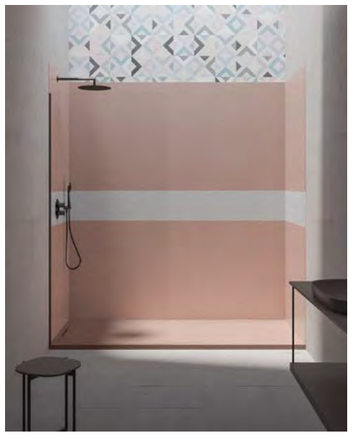
REPLACE YOUR BATHTUB WITH A SHOWER TRAY AND PANELS

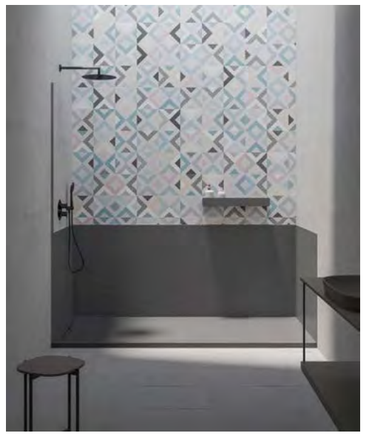
INSTALLATION FAST WITHOUT RENOVATION

Replacing the bathtub with a shower tray is a quick process that does not require a months of work in the whole the bathroom, which saves a lot of time and effort.

It is a fast installation that only requires 3-4 days of masonry and plumbing work.

This shower tray and panel solution is fully adaptable to the existing bathroom in terms of design, colors, sizes, etc.





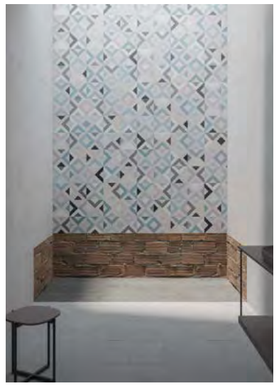
3 STEPS

Replace the bathtub with a shower tray and Skin panels.

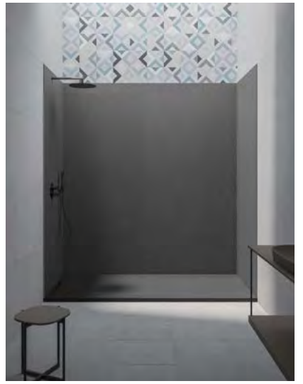
It’s a simple and quick process thanks to the Skin panels that combine with the shower tray.

It’s possible to install the bathtub panels over the existing tiles or finishes without the need for further work.

Bathroom with bathtub



Remove the bathtub



New bathroom with shower tray and panels

BENEFITS OF REPLACING YOUR BATHTUB WITH A SHOWER TRAY

SUSTAINABILITY

Save water and energy. Commit to a more responsible change for the planet and protect the environment.

EFFICIENCY

The shower tray is a more efficient system that saves energy and water, which also leads to a significant reduction in bills.

COMFORT

Always get water at the desired temperature and use only the necessary amount.

SAFETY

Replacing the bathtub with a shower tray reduces the risk of falls and accidents by eliminating the height of the bathtub and using non-slip materials.

ACCESSIBILITY

Eliminates physical and mobility barriers, being easily accessible for everyone, especially children and elderly people, making daily bath routines easier.

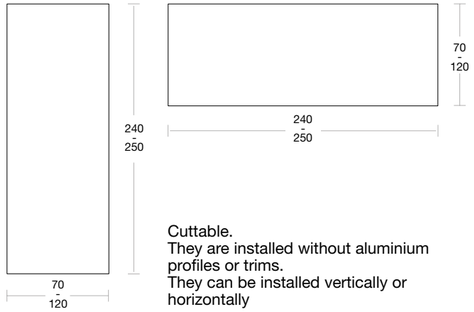
HYGIENE

With a protective coating, based on silver microparticles, which improves the hygienic qualities of surfaces by giving them fungicidal, antibacterial, and hydrophobic properties throughout the product’s life cycle.

SKIN PANELS

CHARACTERISTICS

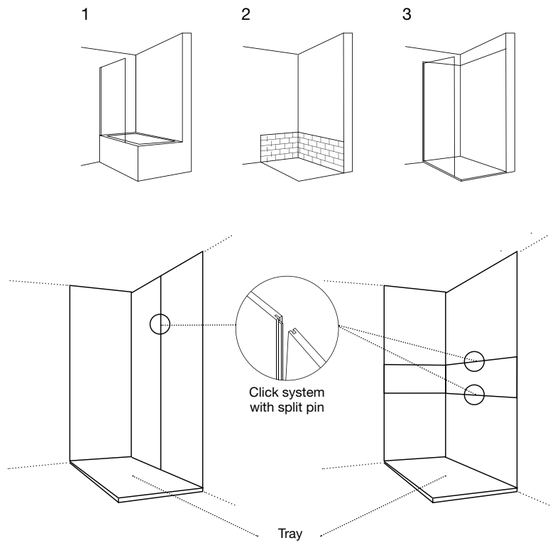
Thickness: 0,6-0,7 cm



Cuttable.
They are installed without aluminium profiles or trims.
They can be installed vertically or horizontally

NOTE: please indicate in the order if you want the panels with tongue and groove. It is recommended to attach a drawing of installation positioning.

CHANGING A BATHTUB INTO A SHOWER TRAY



Vertical installation

REMINDER

Quick and easy
to install,
no labour required.

Multicolor TX

A sophisticated finish
with a unique visual effect

Fiora's Multicolor TX colours are characterized by a double colouring process. The first establishes the base solid colour, and the second adds a unique finish with greater visual depth: subtle and elegant.

Inglet

The collection of furniture with 45-degree mitred fronts and drawers.

A collection of architectural design with straight, simple and elegant lines, with an innovative design of great presence characterised by its 45 degree mitred finish on the front and drawers. Handleless, with a customisable handle, raised with or without legs, and with different textures that give it enormous versatility in shapes and finishes with a wide variety of design options.

Synergy

Slathed lines with neat relief.

Modular collection that looks for the game of lines and reliefs, a combination aimed to give renewed originality. Its offset and curved handle offers the perfect counterpoint to its two straight lined slatted textures: Listello and Surato. With large modularity, the possible combinations with Synergy adapt to every need.

Icon

Icon: design and innovation.

Icon is a synonym of art, design and innovation applied to the bathroom space. A trendy bathroom unit with a unique personality, speci!cally designed to become an icon of design.

An almost sculptural collection, with an architectural essence, the result of Fiora's innovative identity.

Suggestion for cleaning

Fiora's Multicolour TX are **so special** that we recommend cleaning them with Fiora's **Siclean® neutral cleaner**, which is easily sprayed and wiped with a nonabrasive cloth. This way, the colours will look as good as new for much longer.

For small touch-ups, Fiora offers a special applicator.

WASTES

All wastes have been designed and manufactured observing the highest quality requirements and in compliance with standard EN-274 (except where stated otherwise). The majority of the waste models are self-cleaning and in all cases it is possible to cancel the waste effect.

All the wastes have an outlet diameter for 40 mm pipes, although we have adapters for different diameters. Depending on the model of the shower tray, Fiora will send the waste indicated as standard in the table for each model, nevertheless, you can request another one among the different variations available for each model.

The following table shows the features of all the available wastes:

	Height (cm)	Outlet diameter (cm)	Drainage (l/s)	Standard	Collection: Wave	Elax Cassic System	Elax Tea System	Stera	Kou	Limite	Trace	Selene	Silex Titan	Silex	Silex Plus	Privilege	Essential

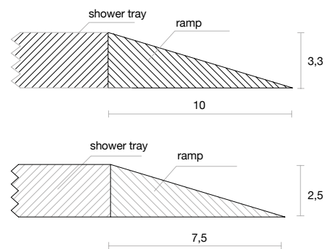
ACCESS RAMP



nº	Description	Code
1	Access ramp	RAMPAP

NOTE: Available in Pizarra and Liso textures

SILEX® TRAYS

All of our shower trays are manufactured from moulds using Silexpol® (Invention patent No. 2,434,591). This is a highly resistant material made from a homogeneous mixture of resins and aggregated carbonates, offering products free from silica. In short, this is a product which is slip-resistant and visually very clean with a density of 1,900 Kg. /m³ with an absorption coefficient of 0,01 %. Impact resistance is similar to the average of natural stone, and is also very resistant to bending, which prevents breaks.

All our Silex® shower trays are packed individually and sent in highly resistant packaging which ensures they arrive without complication. The packaging is a high-resistance cardboard box with a plywood perimeter frame, made according to the dimensions of each tray with a screwed on lid, also made of cardboard, to facilitate the package space.

The following elements are sent with every shower tray:
- Illustrated assembly instructions.
- Warranty certificate and declaration of performance (CE).
- Grates designed by Fiora.
- Drainage waste (choose from various models).

Sticking and sealing
The sticking and/or sealing of the various elements will be performed using a rapid sealant or MS, which are products sold ready-to-use, thus not requiring mixing and which are generally quick drying.

ELAX® TRAYS

ELAX® means innovation, aesthetics and functionality. It represents a revolution in existing shower tray systems both by virtue of its original solutions and the use of resistant and warm materials of great beauty. This shower tray Collection provides extra adaptability for space and safety thanks to their anti-slip systems tested by accredited laboratories.
All Elax® shower trays with grates are packed individually and sent in highly resistant packaging which ensures they arrive without complication. The packaging is a cardboard box made according to the dimensions of each tray. In addition to the tray and its guards, the box contains the following elements:

Each Elax tray with linear drain is sent with the following elements:
- Illustrated assembly instructions.
- Warranty certificate and declaration of performance.
- Stainless steel grate.
- Elax kit.
- Hook.

In the case of the Elax TEA system it includes:
- Illustrated assembly instructions.
- Warranty certificate and declaration of performance.
- Elax kit.

The linear drain kit includes:
- Instructions.
- Warranty certificate and declaration of performance.
- Linear drain designed by Fiora manufactured in polished stainless steel.
- Drainage waste.
- MARAPI cartridge.
- Expanded polystyrene to protect the linear drain.
- Legs and leg fixtures.
- Hook for lifting the part inside the linear drain.

Sealing Elax shower trays
The Elax Tea System shower tray will rest on the linear drain in the area of its rectangular hole. The contact area between the linear drain and the shower tray must be completely watertight, so special care must be taken when sealing, applying the adhesive precisely (one continuous and closed line), and the right adhesive must be applied (use the one supplied with the shower tray: MARAPI).

CE MARKING
The entire range of SILEX shower trays has the CE marking according to European Directive 305/2011 on Construction Products and the standard UNE EN 14527:2016 + A1:2019.
The entire range of ELAX shower trays has the CE marking according to European Directive 305/2011 on Construction Products and the standard UNE EN 14527:2016 + A1:2019

GRATES AND LINEAR DRAINS

Grates designed by Fiora are made of AISI 316 polished stainless steel and cut using high precision laser,.
The lacquered gratings are made of AISI 340 stainless steel with a primer coat of powder coated epoxy paint plus a coat of the requested colour.
The textured lacquered gratings are made of the same material (Silexpol®) and texture as the shower tray, with a compact or aluminium core, depending on the design.
This grate provides the distinguishing finishing touch which characterises our shower trays. There are different types of grates depending on the shower tray model.

ELAX TEA SYSTEM

The linear drains designed by Fiora used in the Elax Linear drain range are manufactured in polished AISI 304 stainless steel and are intended to connect the drain system to the shower tray. To do so it has a structure with an area that acts as a container where the water accumulates before passing to the waste. Its manufacturing system ensures the whole assembly is watertight.
This structure will be underneath the shower tray, hidden by the linear drain trim, which will be the element of the linear drain that is visible. The trim is rectangular and slightly smaller than the hole in the shower tray, so that between the shower tray and the trim there is a perimeter groove of 1 cm where the water will drain.
The trim comes in two finishes: stainless steel and Elaxpol®, the latter in the same colour as the shower tray.
Depending on the user's needs, it is possible to fit a linear drain with two wastes to be able to drain a greater amount of water.
For linear drains with both one and two wastes, there is a range of dimensions available in which the total length varies.
The drainage capacity of the linear drain with one waste in normal use is 0,5 litres/second and that of the double waste linear drain in normal use is 1 litre/second.

SEP SYSTEM

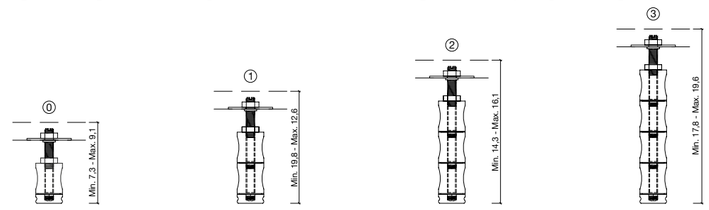
More info and RRP on p. 319

The extendable support by Fiora (tool model no. 201130757) has been designed and calculated to facilitate the quick and safe assembly of any shower tray without building work, avoiding the problems caused by using mortars and similar materials, facilitating the installation and ensuring perfect stability and watertightness of the assembly.
We have designed the product so that it adjusts to any tray size with widths that can range from 70 cm to 100 cm and lengths from 70 cm to 201 cm; in addition, the modular design concept used for the legs offers the possibility of placing the shower tray from a minimum height of 7,3 cm to a maximum of 19,6 cm, ensuring the correct stability of the whole assembly.
The support is comprised of a steel frame with self-fitting special profiles which, after being electro-welded, undergo an anti-corrosion treatment before being lacquered in an oven with a special paint.

Completely closed structure

Completely open structure

It has several legs to sustain the person, shower tray and support altogether, ensuring perfect support throughout the area of the shower tray and not just its perimeter, thus avoiding any possible future deformity that may lead to breakage of the shower tray or a lack of watertightness of the installation. The legs, therefore, are placed on the support and fastened to it by means of a double nut and locknut system that consists of a threaded rod on which the height adjustment mechanism is screwed.
The support includes a single set of legs that can be regulated to the most common heights (7,5-9 cm); for greater heights you must order as many sets of legs as are necessary.



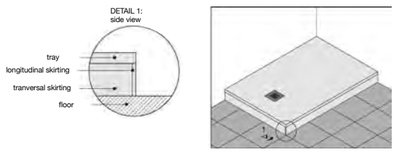
ESP-Min. and max. height SEP-system with the basic kit (without a tray	ESP-Min. and max. height SEP-system with the basic kit + 1 set (without a tray)	ESP-Min. and max. height SEP-system with the basic kit + 2 sets (without a tray)	ESP-Min. and max. height SEP-system with the basic kit + 3 sets (without a tray)

Lastly, the support has a cellular rubber technical profile with EPDM adhered to the structure profile as the base elastomer, with excellent waterproofing and thermal insulation properties and a low remaining deformation.
This profile that is adhered to the structure profile carries out two functions, as on the one hand it acoustically insulates the structure from its surroundings (mainly walls) and in addition it re-seals the most critical areas, which are always the corners, minimising the risk of leaks. The system is complemented with butyl tape that is self-adhesive on one side with the other side coated with absorbent kraft paper, which adheres both to walls and the support and on which the shower tray is subsequently fitted.

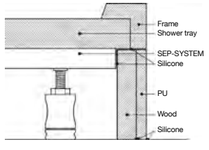
Roll of self-adhesive butyl tape

SKIRTING (RAISING KIT)

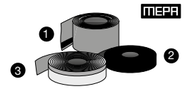
For all cases in which, for technical or aesthetic reasons, it is necessary or desirable to install the shower tray raised with respect to the ground, it is possible to order skirtings.
These skirtings give a distinctive finishing touch, improving the appearance of your bathroom.

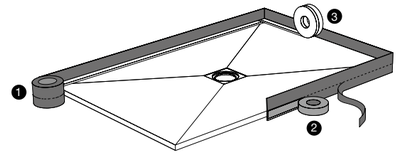


It is a wooden structure where a Silexpol® skirting is fitted on the sides where the structure would be visible. This skirting comes in four textures (pizarra plaquetas, pizarra, bricks and liso) that maintain the aesthetics of the shower tray on the visible sides.
The standard height of the raised skirting is 9 cm.
It is also possible to order skirts for fitting with our SEP-SYSTEM.
Its appearance when installed is shown in the following figure:



WATERPROOFING TAPE





The MEPA Aquaproof Type 2 waterproofing strip is necessary for the installation of our shower trays according to the mandatory sealing norm DIN 18534 and acoustic insulation (DIN 4109, VDI 4100, SIA 181 and ÖNorm 8115-2) in some markets, of special relevance for installers, architects and designers. It acts as a second security watertight barrier behind the silicone joint and our SKIN panels or ceramic tiles.

To guarantee a full watertightness in the shower set, the MEPA waterproofing strip must be used with the corresponding wall installation of the waterproof membrane or sealing product, as well as our drain box (CAJAIMP) for the waste.

The waterproofing consists of a butyl strip (1) to install around our shower trays, it is flexible and self-adhesive which allows a perfect fit, also in the corners. The top part of the strip is covered by a textile area compatible with sealing or adhesive products (MASI/adhesive cement) for the panelling (SKIN panels/ tiles). The set is completed with with an acoustic insulation tape (2) to be installed also around the tray and completes the necessary expansion joint of the installation (0,2cm). A third strip (3) is also included to separate the SKIN panels or ceramic tiles of the shower tray from the wall cladding. The product is supplied in a 10m format, which allows the best utilisation according to the shower tray size and configuration or type of installation. The strip is compatible with 3D corners (L and T) of MEPA for level shower trays installation.
It is necessary to follow the manufacturer installation instructions included in the brochure.

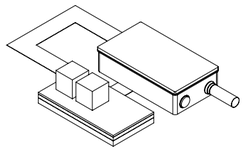
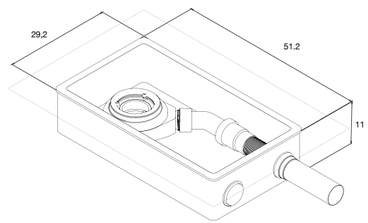
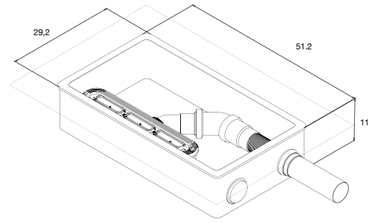
DRAIN BOX



Example with Viega waste



Example with R-Line waste



The drain box is necessary for the installation of our shower trays according to the mandatory sealing norm DIN 18534 /ÖNorm in some markets, of special relevance for installers, architects and designers.

To guarantee a full watertightness in the shower set, it should be finished with the waterproofing strip in our shower tray (BANDAIMP), and with the corresponding waterproof membrane or sealing product in the walls before installing our SKIN panels or ceramic tiles.
The drain box acts as a double barrier in case of possible leaks of the waste avoiding possible damages, which is fundamental especially in old buildings or buildings with wood structures.

The box must be recessed at floor level according to the installation instructions, making it coincide exactly with the waste position, for which it is necessary to measure everything correctly, selecting the adequate pipe outlet hole for the installation, and seal the other one correctly with the o-ring and the supplied plug according to the installation instructions.

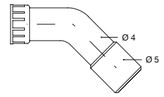
The drain box allows the installation of any type of waste (VIEGA / R-LINE) **except the vertical SE_SIFONV waste, D-52 waste, vertical SESIFON52V waste or Elax trays** and their height adjustment with the supplied flexible elbow. It is necessary to verify the correct functioning of the installation before continuing. Following the verification, the perimeter waterproofing strip of the box must be collected and the supplied cover must be used to protect the box and installation of the waste when fixing the same. Once installed, the protecting film of the waterproofing strip can be removed and attached to the floor. Once the box and waste are installed and before installing the shower tray it is necessary to introduce in the drain box one or both of the supplied support blocks to guarantee an adequate support for the shower tray in the drain area. Not doing this, would void Fiora guarantee.

To install the shower tray, the shower tray sealing must be finished with the application of a continuous MASI line in the perimeter of the waterproofing strip supplied with the box to guarantee the watertightness with the shower tray. The shower tray should have been prepared beforehand with the waterproofing strip (BANDAIMP) according to the installation instructions and it should also be adhered with MASI to the floor.
UNE EN 14527:2016 + A1:2019

ADAPTORS

Inch adaptor
It is possible to send the inch adaptor for Ø4 cm to Ø1 ½".

45º Union Elbow
It is possible to send a 45º union elbow.



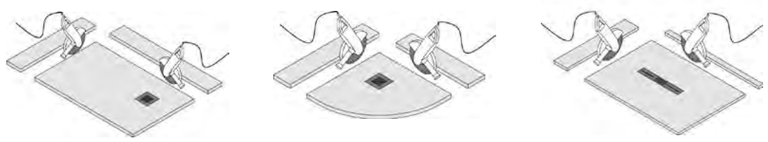
HOW TO CUT OUR SHOWER TRAYS

All Fiora trays, except for the framed, Essential and Elax models, can be supplied custom-cut to a maximum of 100 cm wide (or 110 cm depending on the model) and 200 cm long.
IF THE CUSTOMER WISHES, THEIR TRAY COULD ALSO BE SENT UNCUT AND THEY CAN DO IT THEMSELVES, TAKING INTO ACCOUNT THAT TO DO SO THEY SIMPLY NEED A TOOL WITH A SPECIFIC BDrawer FOR CUTTING STONE OR A DIAMOND DISC.
Any alteration to the size or shape of the shower tray will have an additional charge on the price of the product (see prices in this price list).

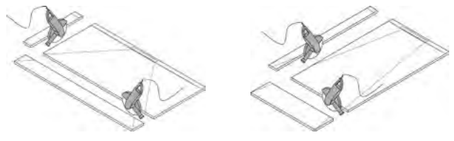
When processing an order for a special tray the following must be taken into account:

- Indicate the final length in cm (if the length is to be cut). In these cases it must be indicated whether the tray is left or right, depending on where the cut is to be made (it is advisable to make cuts on the surfaces which will subsequently be overlapped on the wall or furthest away from the grates).
- Indicate the final width in cm (if the width is to be cut).
- Draw sketches with the shape and dimensions, whether the tray has bevels, high cabinets or other shapes which mean that it is no longer a parallelogram.
- The cuts will be made on one side only, unless otherwise indicated.

Real size customer templates can also be sent to adapt the tray to the template shape.
The cuts are sealed and painted in the same colour as the tray, however the cut area loses its texture, which is why it is recommendable to position the cut sides against the wall.



Sfera, Limite, Trace & Wave shower trays cannot be cut on the drain side. The cuts are sealed and painted in the same colour as the tray, however the cut area loses its texture, which is why it is recommendable to position the cut sides against the wall.



To cut the corners close to the drain, the minimum distance that should be left from the grate to the closest edge is 25 cm, also, the corner involving all of these cuts must be finished with a small burr, as shown in the following image, to ensure the durability of the shower tray.

WASTES

Design waste (for consoles): In those cases in which the waste is going to be positioned in a visible location as is the case of the consoles, Fiora has other design waste models fully manufactured in chrome-plated brass. There are two models, one with a circular section (tubular waste) and the other with a square section (square waste), as can be seen below:

Tubular polished chrome waste

BATHROOM FURNITURE

The articles corresponding to the furniture series are supplied fully assembled and ready for fitting in the space where they are to be positioned. Our articles are supplied duly packed, identified and protected with highly resistant packaging which ensures the receipt of the articles without any type of incident occurring. The following is enclosed with the articles:

- Illustrated assembly instructions in various languages.
- Warranty certificate and EC Declaration (when applicable)
- Assembly kits specific to each article.

TECHNICAL SPECIFICATIONS

Converting your bathroom into an area that incites rest and relaxation, and providing a distinctive design touch is always the aim of Fiora products.
All the products in the series corresponding to Fiora bathroom furnishings are manufactured using the highest quality components, selected and tested to withstand daily use and the environment generally found in bathrooms We can guarantee all of these components due to their adequate selection, efficient quality control and duly automated manufacturing processes (see GENERAL TERMS OF OUR WARRANTY).

The features of the components used for the manufacture of the furniture are described below:

Furniture fronts: The manufacturing system is patented by Fiora (invention patent No. 9000560/0). These type of components are manufactured from high density polyurethane (PU) (500 Kg/m^3) (RIM Reaction Injection Moulding), a material of excellent insulation properties and minimum or zero absorption capacity. Due to its light weight and high resistance, it is the most suitable material for this application. They are subsequently lacquered using lacquers which are also polyurethanebased.

Structure: The structure of the furniture is made from high density board (800 Kg. /m^3) made according to the stipulations of the EN 120, UNE-EN 622 and UNE-EN 13986 standards; as such, this is a board made using wood fibres (previously having been de-fibred with the elimination of the lignite they contained) agglutinated with synthetic resins using high pressure and heat, dry, until obtaining a medium density. The outside surfaces and the edges are sealed with a moisture-resistant primer and a polyurethane-based lacquer, whilst on the inside they are coated in melamine in a customised design. Its absorption properties are non-existent, hence the warranty in the use of this type of raw material.

Adjusting strips: All of the washbasins and built-in vanity tops are accompanied with some aluminium adjusting strips. These are the elements which are positioned between the wall and the washbasin or built-in vanity top to prevent the water passing between the wall and the washbasin or built-in vanity top.

Mirrors: The mirrors feature top quality glass with a thickness of 4 mm which undergo a special treatment, performed on our premises, to seal the edges using a special varnish to prevent corrosion of the silver due to moisture and, as such, the probability of stains appearing.

Shelves: There are two types of shelves: board with similar properties to those described above in melamine and Fumé coloured PVC or in 8 mm transparent glass with polished edges, depending on the unit model.

Drawers: The drawers are manufactured based on a metal structure made of galvanised and lacquered steel and are mounted on guides also made of galvanised steel “quadro” type. They have a gas-damped closing mechanism and are easy to disassemble, both the complete drawer as well as just the front section. They also have a height adjustment system (see instructions).

Doors: The doors are fitted with top-quality nickel-plated steel hinges, many of which include a brake system and quick coupling, enabling multiple adjustments and which have been tested to withstand thousands of space and closing cycles.

Skirting boards: manufactured in lacquered board.

Electrical parts: The electric assemblies of our mirrors are Class II according to the “CE” standard with protection degree IP44. The mirrors supplied with the electric equipment are fitted with an electric outlet for connection to the one already in the bathroom.

ORDERS FOR SPECIAL ITEMS

For those articles/layouts whose dimensions are greater than those in the following price list, two elements can be combined or information can be requested from our Sales Department. The price for an article with special dimensions will always be the price of the article with the corresponding larger dimensions so that it can be cut, plus 20% in the case of widths and 10% for depths of the price of the article to be cut.
In the event of requesting various tasks, the percentage surcharges foreseen in each case will have to be added to the article price per its top dimensions. Our Commercial Department remains at your entire disposal to provide more detailed information.

REQUEST FOR SIDE ADJUSTING STRIPS
When planning a layout, one must take into consideration whether it will be fitted against a wall. In this case, i.e. when the furniture is going to be fitted alongside a wall, it is advisable to add a compensation strip in the case of door cabinets to ensure that the doors open correctly. In this case, to fit the corresponding vanity top it will be necessary to consider the overall length including the compensation strip and to verify that the angle between the back wall and the side wall is 90º. In the figure below you are reminded that the walls are at right angles if the measured diagonal at 100 cm on each side is 141,4 cm. If the two walls are not at right angles the real angle will have to be indicated when processing the order. Use the previous figure to help you determine whether you have exact right angles.

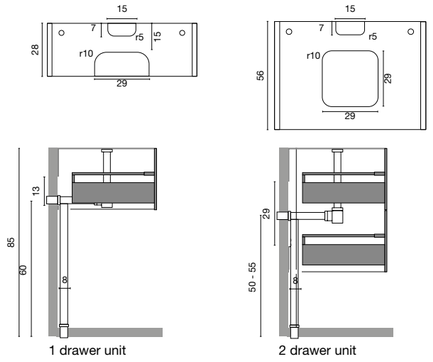
HETTICH DRAWER
For Making, Synergy, and Tiny collections

Front laquered metal unit bar

Furniture manufacturing details:

- Fronts in high density polyurethane lacquered in 19 mm, double sided finish
- Sides in MDF 19 mm lacquered exterior and oil laminate interior
- Hettich drawer with full extraction and brake
- Hinges with brake on top
- Metal shelf support
- Front laquered metal unit bar
- Wooden rear unit rail
- Sanitary emptying included in the price

Furniture manufacturing details:
Rear and side view



1 drawer unit

2 drawer unit

Connection of sockets and drains

Type	Drain height (cm)	Unit height (cm)
Standard and vanity top wall units with 2 drawers	50-55	85
Standard and vanity top wall units with 1 drawer	60	85

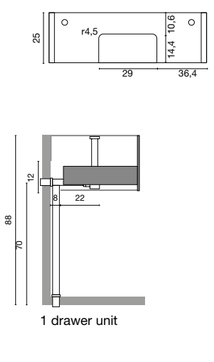
BLUM DRAWER
For Curve, Inglet, and Classic collections

Front laquered metal unit bar

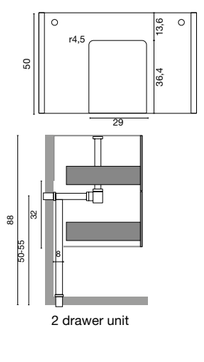
Furniture manufacturing details:

- Fronts in MDF or Arpa 19 mm finished on 2 sides
- Sides in MDF or Arpa 19 mm finished on 2 sides
- Blum drawer with full extraction and brake. Built-in Push system with dual functionality (Push and brake always included)
- Hinges with brake on the upper part with blued finish
- Metallic shelf-holder fittings with blued finish
- Front laquered metal unit bar
- Unit rear bar and metallic holder fitting
- Fiora design metallic under-sink solution
- Sanitary emptying included in the price

Furniture manufacturing details:
Rear and side view. Solution for sanitary emptying



1 drawer unit



2 drawer unit

Connection of sockets and drains

Type	Drain height (cm)	Unit height (cm)
Standard and vanity top wall units with 2 drawers	50-55	88
Standard and vanity top wall units with 1 drawer	70	88

WALL PANELS

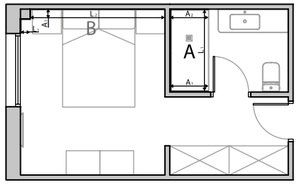
In order to improve the final appearance of your room, Fiora supplies panels in a wide range of Colours and in multiple textures.
The Skin-Panels are made from Silexpol®, with a thickness of 0,6 - 0,7cm and a maximum height of 240 - 250 cm. They are delivered cut to the desired dimensions and are made with easy assembly in mind.
The vertical panels can be installed not only in bathrooms but also in other rooms such as bedrooms or living rooms.
All our panels are sent in highly resistant packaging which ensures the receipt of the articles without any type of damage. Large panels are sent in a cardboard box comprising a plywood perimeter frame and two cardboard covers, one of them screwed on to facilitate its space upon arrival. A simple double-layered cardboard box is used for small panels.

The following elements are sent with every panel:
- Illustrated assembly instructions.
- Warranty certificate and declaration of performance (CE).

This series complements both the shower tray Collections and the furniture and radiators Collections. They can also be used for tiling other rooms in the home.

PANEL ORDERING PROCEDURE
To request the panels from Fiora, the details shown below must be indicated in the order. Il est conseillé d'ajouter un croquis.
- Position of the pannels.
- Their texture and colour.
- Dimensions (length and width) of the parts and area to be panelled: see the following examples where L is the overall length of the tray or the maximum distance to be panelled and A is the tray's width or otherwise the maximum width.

It is important to bear in mind that the panels will be fitted on the shower tray, so the height of panel must be measured from the surface of the tray.



• EXAMPLE A, BATHROOM - BOX FIORA
- A1= 80 cm - 1 panel de 80-0,6=79,4 cm L1 = 170 cm - 2 panels de 85 cm
- A2= 80 cm - 1 panel de 80-0,66=79,4cm

• EXAMPLE B, OTHER ROOMS, BEDROOM
- L1 = 20 cm - 1 panel de 20+0,6=20,6 cm A1= 20 cm - 1 panel de 20-0,6=19,4 cm
- L2 = 280 cm - 2 panels de 100 cm and 1 panel de 80 cm

PANELS IN SHOWER TRAYS (BOX FIORA)
Simply indicate the dimensions to be covered with the panels. There is no need to take into account their overlapping when indicating the width of each panel; Fiora takes care of this during the manufacturing process.
Therefore, for example A, if the shower tray measures 170 x 800 cm, indicate the dimensions:
- L1= 170 cm
- A1 and A2 = 80 cm

As we have said, Fiora will be responsible for taking into account the variation in the panel width caused by their overlap due to the thickness. Therefore, despite having requested L = 170 cm and A = 80 cm, the panels that arrive will not reach these dimensions. They will be:
- Panel 1 = 79,4 cm (80-0,6) - Panel 2 = 85 cm - Panel 3 = 85 cm - Panel 4 = 79,4 cm (80-0,6)

PANELS IN OTHER ROOMS
Simply indicate the dimensions to be covered with the panels. There is no need to take into account their overlapping when indicating the width of each panel; Fiora takes care of this during the manufacturing process.

Therefore, for example B (previous image) indicate the dimensions of the wall and of the possible high cabinets or protrusions, which in this case would be:
- L1= 20 cm - A1 = 20 cm - L2 = 280 cm

When manufacturing them, Fiora takes into account the variation in the panel width caused by their overlap due to their thickness. In example B the panels would arrive with the following dimensions:
- Panel 1 = 20,6 cm (20+0,6) - Panel 2 = 19,4 cm (20-0,6) - Panel 3 = 100 cm - Panel 4 = 100 cm - Panel 5 = 80 cm

STICKING AND SEALING SKIN PANELS
The gluing and/or sealing of the various elements will be performed using a rapid sealant or MS.
For best results, Fiora has high quality silicone adhesives and sealants in the same standard Colours as in the catalogue.

CE MARKING
The entire range of SKIN PANELS has the CE marking according to European Directive 305/2011 on Construction Products and the standard UNE EN 15102:2008+A1:2012.

RADIATORS

All Fiora radiators are packed individually and sent in highly resistant packaging which ensures they arrive without complication. The packaging is a highresistance cardboard box with a plywood perimeter frame, made according to the dimensions of each radiator and with a screwed on lid to facilitate package space.
The following elements are sent with every radiator:
- Illustrated assembly instructions.
- Warranty certificate and declaration of performance.
- Fastening elements.

CHOOSING A RADIATOR
Choosing the size of the radiator, aside from aesthetic reasons, coincides with the heat capacity of the radiator, which depends on the location of installation and factors such as the type of construction, orientation and geographical location, etc. Designers know which heating capacity is required for each room and, consequently, which radiator is required.
Each country has a technical construction regulation which provides the heating requirements which in turn determine the choice of size and number of radiators.
Consult this information when determining the necessary wattage to heat the room where our Celsius radiators are to be installed.

Below you will find an example table (only valid for Spain) which allows you to quickly calculate the necessary power and therefore the size and number of radiators to install. This information is only a guide, that in no case replaces the current regulations, therefore, Fiora shall not be held responsible for any incorrect selection.
Find the place where you want to install your radiator in one of the fields that appear in it, depending on what your home is like and where it is facing; the value that appears is the watts per square metre required, so by multiplying this value by the surface area of the room, you will be able to determine the total watts required and, therefore, the size of the radiator.

Home with thermal insulation	**South-facing**				**North-facing**

CONDITIONS OF USE AND MAINTENANCE
Follow these simple recommendations so you can enjoy your Fiora radiator for many years to come.
Celsius radiators are made of steel coated with Fiora®. This material does not have an absorption capacity which means it can be cleaned using a moistened cloth or a general cleaning product available in supermarkets.
With electric radiators, avoid getting the screen wet as splashes of water may allow the water to penetrate the electrical part and damage the radiator, even disabling it.
Under no circumstances should abrasive elements such as scourers or similar be used, as they may scratch the radiator's lacquer.
Finally, read the section "SAFETY AND OPERATING INSTRUCTIONS FOR THE VULCANO ELECTRIC" thoroughly, which is included in the owner's manual which we send with every radiator.

CE MARKING
The entire range of VULCANO and CELSIUS has the CE marking according to European Directive 305/2011 on Construction Products and the standard UNE EN 442:1996+A1:2004.

CRV150	54	152	5,5	1254	48	½”
CRV180	54	182	5,5	1505	57	½”

ACCESSORIES

CELSIUS RADIATORS:
The different accessories belonging to a Celsius radiator are described below along with the different models that Fiora has available:

- Valves: Our valves and lockshield valves have been designed and manufactured in brass following the highest quality standards. These valves connect the radiator with the heating installation and they are used to increase or reduce the flow of water and therefore the performance of the radiator. The difference between a valve and a lockshield valve is that the valve is connected at the inlet of the flow of water to the radiator, whereas the lockshield valve is connected at the outlet.

Adaptors must be used to connect to the installation.
- Adaptors: The installations are not standard, so there are differences between one and another. This means that our valves may not be valid in themselves to connect the radiator to the heating installation. This is why, depending on the installation, it may be necessary to use one or another of the adaptors for correct connection. To see the available adaptors, consult the price list.

IMPORTANT: please always indicate the type of adaptor you need when you order Fiora valves and lockshield valves.
- Thermostatic heads: These valves regulate the temperature of the room in which they are installed, that is to say, once the desired temperature is adjusted in the sensor head, it adapts automatically to the changes in temperature in the room.
Unlike manual valves, sensor heads save energy when the room temperature rises (due to the heat from the sun shining through the windows, for example).

NOTE: to install a thermostatic head it is also necessary to order the valve.

VULCANO

VUVE150	50	150	3	700	46
VUVE180	50	180	3	800	55

ACCESSORIES

The radiators are elements that will remain fixed in a certain location. Fiora always sends the fittings and parts necessary to assemble them and leave them fixed in the corresponding location. The radiators must be connected to a supplementary installation, which will be responsible for generating the energy that will later be exchanged by the radiators themselves. In the case of the Celsius Radiator, Fiora has a number of valves and adaptors to connect it to the supplementary installation. All Celsius radiators must also have at least one inlet and one outlet valve, or a valve and a lockshield valve. If this is not the case, it must have a bi-tube valve.

- **Towel holder (optional for all radiators):**
2 Towel holder can be placed on each radiator. The towel holder are designed and manufactured to the highest quality standards in AISI 316 stainless steel. They are secured to the radiator by four nuts and 4 bolts on each side that pass through the sides. Radiators are sent pre-drilled for assembly..

SILEXPOL® AND ELAXPOL®

The counter tops, washbasins and showe trays are manufactured from moulding using a new material, SILEXPOL® (Invention Patent No. 2,434,591). This is a highly resistant material made from a homogeneous mixture of resins and aggregated carbonates, offering products free from silica.. In short, this product is visually very clean with a density of 1,900 Kg./ m^3 with an absorption coefficient of 0,01 %. Its impact resistance is similar to the average of natural stone, providing in addition good resistance to bending, which prevents breakages, as certified by the tests described below, carried out by an accredited laboratory. The consoles are manufactured with wash basins or counter tops, which means they have the same features.

ADVANCED TREATMENT WITH ANTIBACTERIAL PROPERTIES
The product has a protective finish, based on silver microparticles, which acts against bacterial activity and is certified according to the ISO22196:2011 standard. This finish:
- Is effective throughout the product's life cycle.
- Does not alter the product's properties.
- Is not harmful to the user, so no preventive measures are necessary.

MECHANICAL TESTS
Our commitment to quality requires us to conduct more tests than those required by the standard, some of which are presented below:
- Cleaning suitability (UNE EN 14527:2016 + A1:2019).
- Water drainage (UNE EN 14527:2016 + A1:2019).
- Surface appearance (UNE EN 14527:2016 + A1:2019).
- Durability (UNE EN 14527:2016 + A1:2019).
- Depth stability (UNE EN 14527:2016 + A1:2019).
- Resistance to chemical agents (UNE EN 14527:2016 + A1:2019).
- Resistance to temperature variations (UNE EN 14527:2016).

PRODUCT EFFECT TESTS
In our everyday life we use many products that, at one moment or another, can come into contact with Fiora products. For this reason our R&D&i Department subjects all our materials to different tests to determine the level of incidence, the durability and the resistance of our materials when faced with the possible effects of these products that are part of our lives.
These tests are always conceived and carried out from a practical point of view, using real products that can be found in any supermarket. Nevertheless, the application conditions on the Fiora product are far more severe than would occur under normal use conditions, as explained in the "CONDITIONS OF USE AND MAINTENANCE" section.

Below are the results obtained from actual samples of Silexpol® and actual samples of Elaxpol®. The test was carried out by applying the product indicated on the left side of the table, for the specified time. Once this time had elapsed, the product was removed, and the basin was cleaned with water and a general cleaner.

Product tested	Exposure time	Silexpol® deterioration	Elaxpol® deterioration
Window cleaning agent	1h	A	A
Limescale remover	1h	A	A
Acetone	1h	A	A
Ammonia	1h	A	A

SILEXPOL® AND ELAXPOL®

USE AND MAINTENANCE CONDITIONS FOR SILEXPOL®/ELAXPOL® PRODUCTS

Follow these simple tips, and you will be able to enjoy your Fiora product for many years.

For daily cleaning, simply rinse the product with water and ensure adequate ventilation in the bathroom.

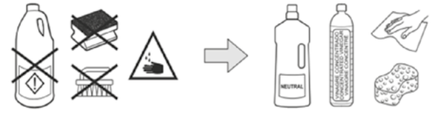
For deep cleaning, rinse the product with water and use any commercial bathroom cleaning product available on the market and clean with cleaners or disinfectants containing alcohol.

A non-abrasive cloth or sponge. It is best to avoid using cleaning or disinfecting products containing alcohol.

Abrasive products (sponges, cloths, or similar) are also not suitable as they may damage the surface.

For maintenance, anti-limescale spray products can be used for cleaning shower walls or similar; these products should be applied to the material and then rinsed. Their use is recommended in areas or regions with very hard water (with high limestone content).

Cleaning or disinfecting products containing solvents or acids, as well as bleach or strong acids, are also not suitable.



INSTRUCTIONS FOR THE SURFACE REPAIR OF A SILEXPOL® ELEMENT

Our products have undergone impact tests and exceed the optimal usage values. However, unlike other items available on the market, our Silexpol® elements can be repaired in case of defects caused by the fall of sharp and heavy objects. To this end, it is possible to request the IMPACT REPAIR KIT.

This kit consists of two separate pots, one with white paste and the other with a pink hardener. Both products must be mixed, using the white paste and a small proportion of the pink hardener, until a mixture as homogeneous as possible is obtained. Once the mixture is ready, it must be applied to the area to be repaired.

After application, let it dry for at least 1 hour, then check after this time if the paste has hardened (the hardening of the paste is indicative and depends on the existing environmental conditions); if not, let it dry longer.

When the paste has hardened, it is time to apply the paint according to the instructions given in the previous paragraph "INSTRUCTIONS FOR REPAIRING A SILEXPOL® ITEM".

SOLID

PRODUCT ATTACK TESTS

In our daily life, we use many products that, at some point, may come into contact with Fiora products. That's why our R&D Department subjects all our materials to different tests to determine the degree of impact, durability, and resistance of these materials against potential attacks from these common products in our lives.

These tests are always designed and carried out from a practical point of view, using real products that can be found in supermarkets. However, the conditions of application on the Fiora product are much stricter than what would happen under normal usage conditions, as described in the section "CONDITIONS OF USE AND MAINTENANCE OF SOLID SURFACE PRODUCTS".

Below are the results obtained from real Solid Surface samples. The test was carried out by applying the product indicated to the left of the table for the specified time. Once this time had passed, the product was removed, and the test sample was cleaned with water and a general cleaner.

Product tested	Exposure time	Solid deterioration	Pure deterioration	Ceramic deterioration
Window cleaning agent	1h	A	A	A
Limescale remover	1h	A	A	A
Acetone	1h	A	A	A
Ammonia	1h	A	A	A
96° Alcohol	1h	A	B*	A
Iodine	1h	A	A	A
Bleach and detergent	1h	A	A	A
Hydrochloric acid solution	1h	A	A	A
Hair dye (dark colour)	1h	C	A	A
Bathroom cleaner (<5% anionic surfactants)	1h	A	A	A
General cleaner (<5% anionic surfactants)	1h	A	A	A
Pipe unblocker	1h	A	A	A
Mascara	1h	A	A	A
Nail varnish	1h	D	D	D
Makeup	1h	A	A	A
Lipstick	1h	B	A	A
Hair removal cream	1h	A	A	A

The classification used corresponds to the following codes:
A: No significant visible changes. B: Slight change of colour. C: Moderate change of colour. D: Significant change of colour. E: Layer etched.

CONDITIONS OF USE AND MAINTENANCE OF SOLID SURFACE PRODUCTS

For daily cleaning, simply use a non-abrasive cloth/magic sponge with soapy water or a universal bathroom cleaner. If stains persist, use a cream cleaner with a non-abrasive cloth, gently rubbing in circular motions. If the stain does not disappear, use acetone (without dye)/solvent, soaking a non-abrasive cloth and applying it to the surface in the same manner.

INSTRUCTIONS FOR SURFACE REPAIR OF A SOLID SURFACE ITEM

If the vanity tops have very persistent stains or superficial scratches, these defects can be concealed using sandpaper. First, use 240-grit sandpaper with circular motions. Finally, use 400-grit sandpaper to achieve the smoothest surface possible (do not use finer sandpaper, as it may create reflections).

INSTRUCTIONS FOR REPAIRING DAMAGE WITH MATERIAL LOSS ("IMPACTS") ON SOLID SURFACE ITEMS

For defects caused by sharp objects dropping onto the product, it is possible to repair them in exceptional cases. Please contact Fiora for more information. For cases where a small impact has caused slight material loss, we have a REPAIR KIT for solid surface. This kit contains two pots, one with resin and the other with a thickening agent (to prevent the mixture from being too liquid) along with a catalyst. Mix the products in the proportion indicated in the instructions, apply it, and then sand it after drying.

NATURAL STONE

PRODUCT ATTACK TESTS

In our daily life, we use many products that, at some point, may come into contact with Fiora products. That's why our R&D Department subjects all our materials to different tests to determine the degree of impact, durability, and resistance of these materials against potential attacks from these common products in our lives.

These tests are always designed and carried out from a practical point of view, using real products that can be found in supermarkets. However, the conditions of application on the Fiora product are much stricter than what would happen under normal usage conditions, as described in the section "CONDITIONS OF USE AND MAINTENANCE OF NATURAL STONE PRODUCTS".

The results obtained on real samples of Natural Stone are shown below. The test was carried out by applying the product shown on the left-hand side of the chart for the indicated time. After this time, the product was removed and the test tube was cleaned using water and a general cleaner.

CONDITIONS OF USE AND MAINTENANCE OF NATURAL STONE PRODUCTS

Natural Stone products have been treated with hydrophobic and oleophobic antimicrobial treatments that prevent the formation of mold and bacteria, making cleaning easier and preserving their original beauty over the long term. For daily maintenance, simply rinse with water and dry to prevent the formation of limescale stains. It is recommended to use neutral pH cleaning products and non-abrasive sponges, avoiding products containing acids, alcohol, and especially anti-limescale products that could severely damage the piece, sometimes irreversibly. Do not use other cleaning products unless it is clearly specified that they are intended for Natural Stone.

INSTRUCTIONS FOR SURFACE REPAIR OF A NATURAL STONE ITEM

If, due to improper use of Pietra Naturale products, they have suffered damage such as marks or superficial scratches, it is possible to repair them in exceptional cases. Please contact Fiora for more information.

CERAMIC

PRODUCT ATTACK TESTS

In our daily lives, we use many products that, at some point, may come into contact with Fiora products. This is why our R&D Department subjects all our materials to various tests to determine the degree of impact, durability, and resistance to the possible attack of these common products in our lives.

These tests are always designed and carried out from a practical point of view, using real products that can be found in any supermarket. However, the application conditions on the Fiora item are much stricter than what would occur under normal usage conditions, as described in the section "CONDITIONS OF USE AND MAINTENANCE OF CERAMIC PRODUCTS".

Below are the results obtained from real samples of ceramic. The test was conducted by applying the product indicated on the left side of the table for the specified time. Once this time had elapsed, the product was removed, and the sample was cleaned with water and a general cleaner.

CONDITIONS OF USE AND MAINTENANCE OF CERAMIC PRODUCTS

For daily cleaning, simply use a non-abrasive cloth/magic sponge with soapy water or a universal bathroom cleaner. If stains are persistent, use a cream cleaner with a non-abrasive cloth, rubbing gently in circles. If the stain doesn't disappear, use acetone (without dye)/solvent, by soaking a non-abrasive cloth and applying it to the surface in the same way.

GENERAL SALES TERMS

The terms expressed below are applicable to all contracts/orders and, as such, it is assumed that these are understood and accepted by the purchaser when submitting the order.

All orders made by our agents, representatives, vendors, or others, will be considered as valid, provided that these are sent to Fiora on paper or on a printable electronic support regardless of the format.

This pricelist cancels the previous ones. Fiora reserves the right to update it without notice at any time due to market variations.

PRICES

All prices quoted in this price list are recommended retail prices without taxes. Fiora accepts no liability for any errors that may occur or for any miscalculations that may be made when drawing up a quotation.
The prices are subject to possible modifications due to variations in the prices of the raw materials, tariffs or others depending on market conditions.

ORDERS

Making orders
All orders must be submitted to our Commercial Department or to our agents/representatives in writing, to avoid duplicating this operation and, as such, sending them to both.

Cancellations / Modifications of an order
Orders cannot be cancelled or modified once manufacture has begun; this may be consulted by the client/representative in the Private Area of our website (see section CONSULT ORDERS VIA INTERNET).

RETURNS & OTHER

Returns
The return of goods will only be admitted when it has been communicated to and accepted by our Commercial Department and provided that the goods are received correctly packaged. Under no circumstances we will accept returns of made to measure items.

Features and technical information of the product
All of the technical information contained in this price list is merely guidance material. Fiora reserves the right to modify anything which it considers opportune provided that it does not affect the essential features of the product featured in this price list. Different types of lighting, moisture and other environmental factors can result in variations in the lacquering process meaning that, occasionally, products which have been purchased at different times cannot be perfectly joined. These differences, should they exist, will tend to lessen over time and cannot be the object of a claim.

Dimensional tolerances
Due to the materials used, and the manufacturing process used for all our products, they can have a general tolerance of ±2%.

Colour tolerance
There is a wide range of textures and Colours available for each shower tray model, as shown in our catalogue and price list.
Due to the tolerance of the pigments used to manufacture the paint, there may be slight variations in tone between the colour of the finished product and those shown in the illustrated documents and samples.

PACKAGING & DELIVERIES

Packaging
All our products are delivered duly packed using protective film and cardboard and/or wood depending on the item.

Transport
Fiora's prices include transport (if the delivery has been agreed as such) to the destination previously agreed with the customer, or other destinations (provided that this does not imply an increase in transport cost, in which case this will be added to the invoice by Fiora) provided the net purchase value exceeds the following amounts:

- Iberian peninsula: 250 €
- Europe: •

There are additional charges due to customs management or extra transport costs in the following areas/countries:

- Canary Islands, Ceuta and Melilla: an additional 5% of the invoice amount.
- San Marino: 60 € per shipment.
- Monaco and Andorra: 35 € per shipment.
- Switzerland: 35 € per shipment.

This chapter does not apply to third-party countries not belonging to the European Economic Community that have not been mentioned above, for which the transport price will be agreed previously.

Lead time
All placed orders can be looked up in our website, as mentioned above, where the delivery time for each of them is specified.
No compensation for damages or interests will be recognized for possible delays.

GENERAL SALES TERMS

ORDER & PAYMENT CONDITIONS

Acceptance of orders and payments
By prior agreement, payments can be made bank transfer, promissory note, bank draft or bank acceptances. The acceptance of orders and agreed payment conditions is subject to the result of the commercial information that Fiora reserves the right to obtain. Default in payments, even if just one instalment, will entitle Fiora to suspend the delivery of the other pending orders.

Litigations / controversies
Fiora will endeavour to resolve any conflicts which may arise with our customers amicably. Nevertheless, for any dispute or conflict which may occur between the parties in relation to the interpretation and fulfilment of this contract, both parties agree to submit themselves to an equity arbitration as set forth in the Arbitration Law of the 5th of December, 1988, of the Kingdom of Spain.

GENERAL TERMS OF OUR WARRANTY

Through means of this document, Fiora concedes a commercial warranty, hereafter CTW, for the products it sells, in accordance with the conditions described below:

1. The detail and scope of this CTW is determined by the repair, cost of the spare parts, labour and, if applicable, the replacement of the product protected by the same within the territory of the European Union. Sales made outside the European Union are not included within the scope of this warranty unless expressly agreed by Fiora.

2. The repair or replacement of any non-compliant part, as well as subsequent modifications requested by the client, should be undertaken by authorised Fiora staff. In this case, Fiora will respond to the lack of conformity that led to the repair or replacement during the first 6 months after the repair or replacement.

3. The duration of these GTW is 5 years or 3 years (Solid Surface, Natural Stone and ceramic products), starting from the date of issue of the invoice by Fiora to its customer. The invoice issued by the retailer to the end customer will not be accepted.

4. As an exception to the previous paragraph, the warranty period for all products that have been exhibited at the VENDOR's premises is one year, without prejudice to the legal warranty period granted by Fiora to its customer. The legal warranty period granted by the SELLER. The holder of this GC must prove the validity of the same by means of the purchase invoice of the article or the deed of acquisition of the property where the article is located.

5. Fiora guarantees its products and components against any conformity flaw, provided that they have been correctly installed (in compliance with the standard in force and the instructions indicated for their assembly, maintenance and conservation) and that they have been used correctly and as their design intended.

6. The distributor/customer will accompany this warranty document, duly completed, with the invoice or receipt of purchase for the product.

7.Consumable items (bulbs, fluorescent tubes, halogen lamps, rubber, gaskets, etc.) are not covered by this warranty.

8. The following are excluded from this CTW:
   a. Damage resulting from transport, if not carried out by Fiora.
   b. Damage resulting from incorrect installation, handling or repairs performed by staff not authorised by Fiora, as well as damage due to natural wear, poor treatment, and use and maintenance which is incorrect, unsuitable, abnormal or different from usual and/or to that indicated in the relevant instructions.
   c. Damage caused by dirt, incrustations, calcification or other physical, chemical or electrochemical defects.
   d. Damage which cannot be objectively attributed to the manufacturer.
   e. For shower trays, prior to completing the floor tiling and fitting any other element on the shower tray, the fitter must check that the installation is correct and verify that the tray drains perfectly. Should this verification not be completed correctly, Fiora will not bear the costs resulting from replacing the elements fitted on the trays such as shower screens or ceramics.
   f. Damage due to interventions or modifications to the products carried out by the purchaser or by staff not authorised by Fiora, such as the cutting of shower trays without following the indications described in the instructions regarding the minimum cutting distance in relation to the drain or the rounding of corners in concave interior cuts.

9. In the event that the product delivered to the consumer is not in compliance with the product sales contract according to the provisions of article 125 of Legislative Royal Decree 1/2007 of 16th November 2007, the consumer must inform the VENDOR of this lack of conformity within two months of ascertaining this. Likewise, in order to exercise product replacement rights, reduce the price or, if applicable, cancel the sales contract, the consumer must contact the DISTRIBUTOR of the product.

10. This warranty does not affect the consumer's legal rights as granted to them in Legislative Royal Decree 1/2007 of 16th November 2007 in the case of the Kingdom of Spain or those in Directive 1999/44/EC of 25th May 1999 and their transposition to respective national laws.

CUSTOMERS' PRIVATE AREA
Our website www.fiorabath.com includes a private area for our customers to place online orders and track orders in progress. If you are a Fiora customer and would like to access your private area, we invite you to contact our customer service department so that they can provide you with your passwords.
